A photograph of a modern interior space. On the left, a staircase with light-colored wooden steps leads upwards against a grey, textured wall. In the center and right, there are several frameless doors with a dark, possibly black, finish. One door is open, revealing a bright, light-colored room beyond. The floor is dark and reflective. The overall aesthetic is minimalist and high-end.

HIGH-END FRAMELESS DOORS. STRONGER IS BETTER.

INTERIOR FRAMELESS DOORS

Leading the frameless door market for over 15 years, Insensation is specialized in this technology and has developed products for specific markets in the USA and Europe.

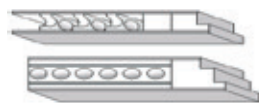

Our Interior Frameless Swing, (IFS) and our Interior Frameless Pocket (IFP) cover a wide range of modern solutions for high-end architecture.

With references throughout the USA and Europe, our doors accept either single or double-plated drywall boards in both USA and European standard thicknesses.

This is advanced door technology, with extremely strong mounting brackets, highest quality hinges and gaskets and available in a huge range of colors.

We sell lacquered or primed door leaves and jambs, pre-milled for hinges and lockcase, ready for installation and individually protected for shipment to your building site.

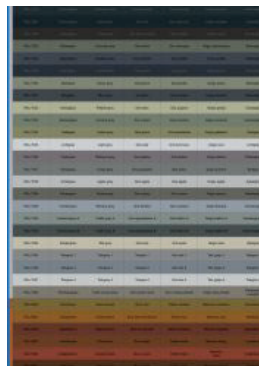

OPTIONS

Door cores come in standard honeycomb or tubular versions. Tubular is comparable to solid core, but allows us to achieve greater heights with a slightly reduced weight.

Concealed 3D **hinges** are available in aluminum color, black or white.

All our doors are standard delivered in a white matt **lacquer**. We also can lacquer them in any RAL color.
